Business Profile

Graduating in computer science and becoming a professional for 10 months, I continue on this journey. With 10 months of experience in web development, both front-end and back-end, I believe I can collaborate with your company by learning and evolving along with it. I'm very excited to have the opportunity to join your team, I'm sure it would be a great partnership. I love communicating with people, making new friends and gaining knowledge, as well as always being focused on my goals and seeking to improve my skills as a developer. I am always willing to help and discuss problem/obstacle resolutions, this applies both to my profession and to daily situations as well. Furthermore, I believe I can and I am ready to collaborate with Your Team.

Language Technologies

Programming languages

- **Basic knowledge:** Laravel Framework, JavaScript, Python;
- **Intermediary knowledge:** PHP, HTML5, CSS3, Bootstrap 4;

Data Base: MySQL and MySQLWorkbench;

Resources: Git and GitHub;

Finance

- **Basic knowledge in finance (especially investments)**

Business Experiences

LIFE CTI

Programmer/Developer | Internal migration of i9 Corp System, tax demand software, migrating from PHP 5.2 to PHP 8.2. Development and improvement of the tool to meet tax demands, using advanced PHP, JavaScript and Ajax resources. Also other activities to improve the organization of the work tool, such as CRUDs for example.

PROJECTS

Relationship with personal projects or Freelancer | Working with HTML5, CSS3, JS, PHP, Laravel Framework, SQL, GIT and GITHUB. Always looking to improve my skills in languages and tools. Working in the Front-End and Back-End with immense pleasure in evolving.

Academic Profile

Information Systems

CESAR School (Bachelor Degree)

Starts In February 2024

Extracurricular courses and certificates

Fullstack Web Development - Udemy

Languages

Intermediary English

Native Portuguese

Kerry Muniz Santos

Web Developer (FullStack)

If I said I wasn't excited and excited about my future I would be lying. I am happy to be able to learn more and more about programming, this encompasses its concept, its languages, its purposes, projects, proposals, opportunities, among other requirements that the Developer world provides. I really believe that I can collaborate with your team

and be part of it, and I hope so. I feel willing to learn new tasks and accept new challenges, after all, this is what makes us grow in our professional career, and also in personal challenges throughout life.

I continue to reinforce that what I want most is to grow as a Developer, and perhaps get to know and learn new areas in this branch of technology. I would say that the phrase “no pain, no gain” has never made so much sense, and I say this because I truly believe that with discipline, focus, dedication and resilience you can achieve your goals.

Organization is one of the pillars to maintain a constant line of career growth, after all, punctuating priorities, escalating tasks, ordering tasks are fundamental to carrying them out with excellence and tranquility and, in a way, serves as an increase for our personal life too.

I believe that with the resources I have, I can join your company and add value individually and collectively.
